

Clean Water for everybody

The Situation:

Still more than 650 million people have no access to safe drinking water. The polluted water causes many life-threatening illnesses, like Diarrhea, Cholera or Typhus and every year 1,5 million people die from contaminated drinking water.

Mostly they get their water from rivers, lakes or wells and carry it in jerrycans to their homes. Even if the water source has a good water quality, the jerrycan might be a source of contamination. Why? A jerrycan usually is not easy to clean and bacteria will grow very well inside the jerrycan.

That´s why we invented the **what-a-bird** system for jerrycans.

How it works:

The **what-a-bird** is designed slim, so it fits in any standard jerrycan. The use is very easy, you put it in the opening of a water-filled jerrycan, press on the hand piece and already clean drinking water flows from the outlet. Depending on the water quality (turbidity in the water) and the regular cleaning, the lifetime is 3-5 years. After that, only the filter cartridge has to be changed.

what-a-bird

The benefits:

- 99,9999% Bacteria and parasite removing rate, for example Cholera, Typhus, E.coli
- No waiting time, just pump and the water is treated to clean drinking water
- No storage of clean drinking water, it´s a point of use solution
- No elaborate cleaning of storage jerrycans, the drinking water has not to be stored
- No running costs for treating the water, their is no need to get chemicals or buying firewood or charcoal
- Comfortable filling of glasses and cups, the water will be pumped directly out of the jerrycan
